Reliance Worldwide Corporation Europe

RWC and its brand families develop safe, sustainable and efficient solutions through a range of innovative products.

For a diverse range of sectors such as:

- Plumbing and Heating
- Water Treatment (Filtration, Softening, Osmosis and Dosing)
- Beverage Distribution
- Compressed Air and Pneumatics
- Telecommunications
- Industrial
- Automotive

Which **applications** are **supported** by each **RWC** product?

For each product or system, you can quickly identify compatibility by the following icons.

Drinking Water

Water that we can consume or drink without danger to our health.

SHW

Sanitary Hot Water intended for human consumption (potable) that has been heated.

Heating Radiators

Radiator heating is the use of radiators to transfer heat to the room.

Underfloor heating

Heating or cooling by the use of water through pipe circuits located in the floor to transfer heat or cold to the floor.

Iced Water

Water at a temperature between 0° C and 15° C.

Solar Installations

These are systems or components for use in solar thermal installations.

Rainwater

Rainwater that is not absorbed by the ground and is collected and channelled away.

Industrial Water

Water originating from any industrial activity such as process or waste water.

Lubricated Compressed Air

Compressed air with a lubricator to inject a specific quantity of oil into the air stream to lubricate pneumatic equipment.

Dry compressed air

Compressed air that does not use oil lubricators.

Food sector

This is the sector that is responsible for all processes related to the food chain, including the processing of food products.

Chemical Industry

The industry that extracts and processes natural or synthetic raw materials in order to create a commercial product.

Pharmaceutical industry

The industry involved in the manufacture and preparation of medicinal chemicals.

Petrochemical industry

It is the industry that deals with the treatment and transformation of petroleum, petroleum products and natural gas.

Plumbing and Heating

1. Pipes

2. Systems

3. Flow, Temperature and Pressure Control

1. Pipes

RWC is a leading manufacturer of plastic pipes for various applications. Under the SharkBite and John Guest brands, we offer the widest range on the market in millimetres, inches, single or multi-layer.

- T Multilayer Piping with Aluminium - PERT / AL / PERT
- Peroxide System Cross-linked Polyethylene Piping - PEXa
- Temperature Resistant Polyethylene Pipes - PERT

- SharkBite Multilayer - PERT / AL / PERT
- SharkBite PEXa
- SharkBite PEXa UV Black Protection
- SharkBite PERT
- SharkBite PEXa EVOH (3 LAYERS)
- SharkBite PERT EVOH (3 LAYERS)

SharkBite Multilayer - PERT / AL / PERT

APPLICATIONS

- Composed of temperature resistant polyethylene (PERT Type II).
- With aluminium butt welded "head to head".
- Maximum temperature 95° C.
- Maximum pressure 10 bar.
- Oxygen diffusion 0 mg/l

Manufactured according to ISO 21003

| Code | Colour | Dimension | Length |
|----------|--------|-----------|---------|

| S8L324 | White | ø32x3.0 | 4 (48) |
| S8L405 | White | ø40x3.5 | 5 |
| S8L505 | White | ø50x4.0 | 5 |
| S8L635 | White | ø63x4.5 | 5 |

1. Flexibility

PERT type II is a material used for the manufacture of multi-layer pipes in plumbing and heating applications due to its flexibility. It can be bent and is easier to change direction in tight spaces compared to PVC, CPVC, PP, copper or steel pipes without the need for elbows, reducing costs, potential leak points and pressure losses generated by connections.

2. Easy to install

SharkBite Multilayer pipe installation is more economical than any other type of metal pipe such as copper or steel. Compared to copper, for example, no soldering is required, and compared to other plastic materials, it does not even require glue.

3. Safety

Compared to metallic materials, SharkBite Multilayer does not corrode and does not develop any electrochemical processes that lead to degradation. Compared to copper pipe and fitting systems, its installation does not require the use of a flame that can cause fires, making it one of the safest systems available today.

4. Compatibility

SharkBite Multilayer is perfectly compatible (using adapters), with installations in other materials such as copper and PVC.

5. Durability

SharkBite Multilayer es un material con altas propiedades termomecánicas y se caracteriza por una vida útil de al menos 50 años. Las normas internacionales requieren que los productores de sistemas de tuberías multicapa realicen pruebas que puedan verificar y garantizar la durabilidad del producto como en ISO 21003.

6. Resistance

SharkBite Multilayer has a pressure and temperature resistance of 95° C at 10 bar.

7. Combination PERT type II and aluminium

It allows to obtain "MULTILAYER" pipes, which provide exceptional mechanical properties, offering a single product with the advantages of both materials.

8. They are 100% impermeable to oxygen

Thanks to the butt-welded aluminium layer.

The performance of multilayer tubes depends on many factors:

Type of aluminium alloy, thickness of the aluminium, the position of the aluminium layer, the technology used in forming and welding the aluminium, the adhesion of the PERT to the aluminium.

Characteristics of the aluminium alloy used in the production of SharkBite Multilayer are:

- Excellent forming and welding properties.
- High mechanical strength at high temperatures.
- High elastic strength.
- Excellent adhesion due to special degreasing treatments applied on the surface.

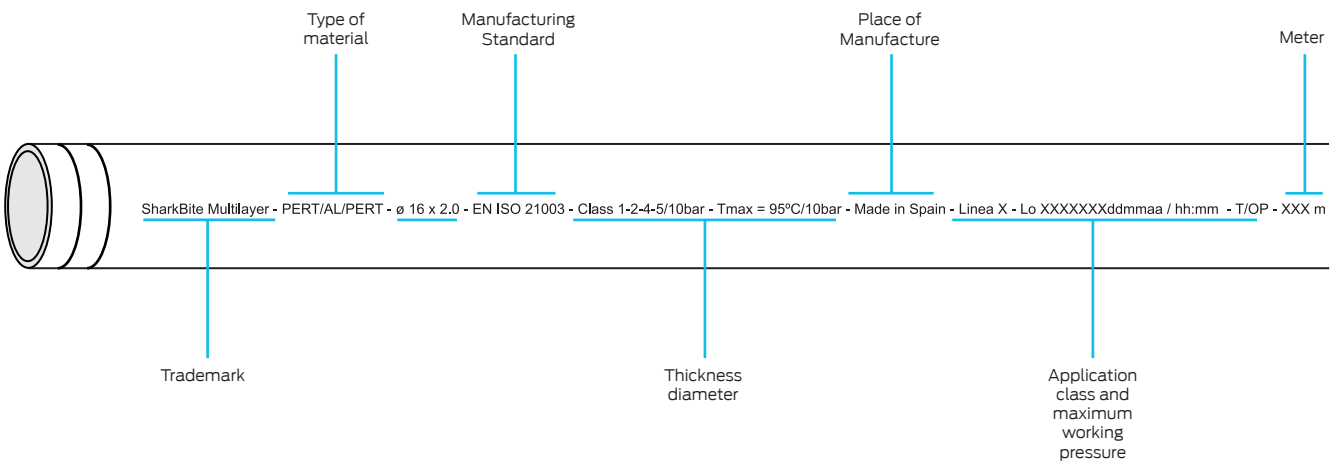

BENDING RADIUS :

SharkBite Multilayer Pipe Marking

SharkBite Multilayer Isolation

- PERT/ AL / PERT multi-layer pipe with insulation.
- Maximum temperature 95° C. Maximum pressure 10 bar.

The insulation of SharkBite Multilayer pipes not only reduces energy exchanges between the pipes and their surroundings, but also insulates them from noise and at the same time provides protection.

Manufactured according to ISO 21003

In pipes used for the conveyance of cold water, insulation is used for:

- Prevent the formation of condensation.
- Avoid or reduce the heating of water.
- Prevent or reduce noise transmission.
- Protect the pipe.

In pipes used for the conveyance of hot water, insulation is used for:

- Reduce energy loss and consequent water cooling.
- Avoid or reduce noise transmission.
- Protect the pipe.
- Absorb heat expansion / contraction.

RWC EUROPE supplies SharkBite Multilayer pipes with pre-assembled, fire-retardant, closed-cell polyethylene foam insulation, which speeds up and simplifies the installation of systems.

SharkBite Multilayer with insulation can be used for air conditioning systems as long as the temperature and pressure limits defined by the standard are observed. Typical liquids used are:

- Water
- Water with glycol (ethylene or propylene)
- Other Liquids provided that are not compatible / non-aggressive with PERT type II (consult compatibility).

Therefore, cryogenic liquids such as Freon or ammonia should not be used.

The choice of insulation thickness depends on the application and conditions of use, and always in compliance with local regulations or standards.

| Diameter | Thickness Insulation | Outside Diameter | Weight | Thermal Conductivity |

Cross-linked Polyethylene PEXa - SharkBite PEXa

Cross-linked polyethylene (commonly abbreviated as PEX), is used for the manufacture of pipes for hot and cold water supply, for the transport of natural gas and for the transport of industrial chemicals, manufactured according to ISO15875 (EUROPE) AS2492 (AUSTRALIA) and ASTM F876 (USA).

The raw material of PEX is HDPE (high density polyethylene) and contains bonds in the polymer structure which completely modify its characteristics, thus making it a very versatile material. The raw material of PEX is HDPE (high density polyethylene) and contains bonds in the polymer structure that completely change its characteristics, changing the thermoplastic to a thermoset.

The cross-linking process can be carried out using different technologies which are recognised by international standards and identified as international standards and identified as : PEXa - PEXb - PEXc

The cross-linking process is carried out during extrusion (PEXa) or after extrusion (PEXb and PEXc). The ISO 15875 standard indicates the degree of cross-linking that each type of cross-linking process must have.

- PEXa ≥ 70% [SharkBite PEXa](#)
- PEXb ≥ 65%
- PEXc ≥ 60%

Cross-linking improves the properties of the pipe, obtaining:

1. High temperature resistance 95° C
2. Low temperature resistance - 40° C - PEXa
3. Chemical resistance
4. Impact resistance
5. Tensile strength
6. Excellent thermal memory

PEXa is produced by the peroxide method (Engel or Infrared System I.R. are the most common). Cross-linking is carried out at a temperature higher than the melting point of HDPE polyethylene. The material is extruded and immediately thereafter held at high temperatures and/or pressures. During this process, the peroxide decomposes into free radicals and reacts with the polymer, creating chains that are connected to each other in a three-dimensional network by chemical bonds.

SharkBite PEXa tubing, due to its excellent thermal memory, can be repaired in the event of accidental bursting during installation. **Repairs can be made using the following recommendations:**

- Make sure that the installation is not pressurised.
- Straighten the pipe by hand.
- Heat the pinched area with a heat gun (never with a flame) until the tubing becomes transparent and returns to its original size and position.
- Allow the SharkBite PEXa tubing to cool at room temperature or with the aid of a wet rag until the tubing has returned to its original opaque appearance.

SharkBite PEXa tubing due to its excellent thermal memory absorbs the increase in size due to freezing. Cross-linking by the PEXa system (peroxide method), allows it to expand (due to the increase in volume due to freezing) and absorb much of the expansion energy of the freezing process. No pipe is completely immune to freezing, but RWC's **SharkBite PEXa** pipe is extremely resistant to freezing damage.

In the event of freezing, the following recommendations may be made:

- The installer or user should correct the lack of insulation to prevent recurrence.
- Pour hot water over the affected portion of the SharkBite PEXa tubing.
- Wrap warm rags or towels around the affected portion of the frozen pipe.
- Heat the area with air (never with a flame) or an air heater until completely thawed.

BENDING RADIUS:

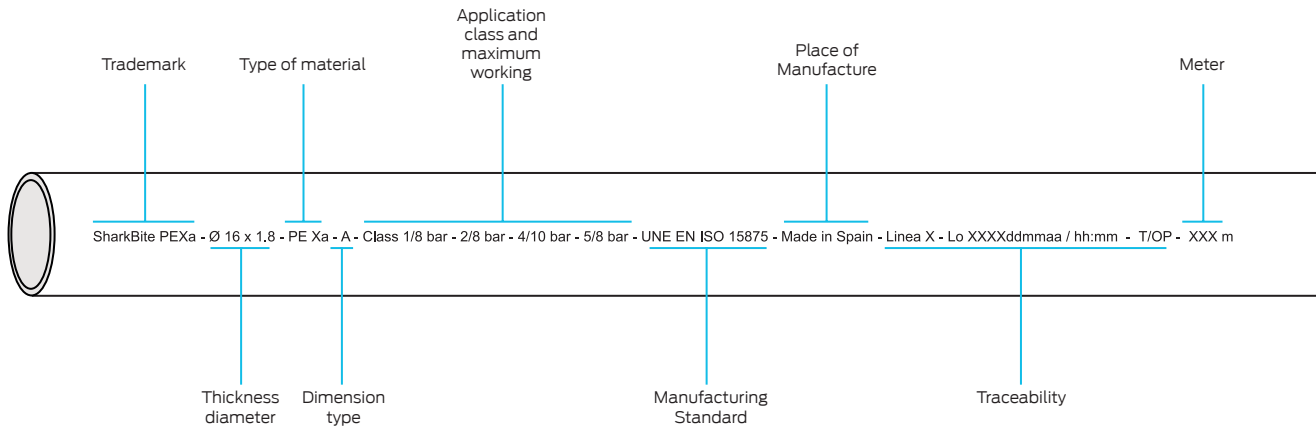

| Diameter | Hot Bending | Cold Bending |
|----------|-------------|--------------|
| Ø16x1.5 | 48 mm | 64 mm |
| Ø16x1.8 | 48 mm | 64 mm |
| Ø16x2.2 | 48 mm | 64 mm |
| Ø20x1.9 | 60 mm | 80 mm |
| Ø20x2.8 | 60 mm | 80 mm |
| Ø25x2.3 | 100 mm | 125 mm |
| Ø25x1.5 | 100 mm | 125 mm |
| Ø32x2.9 | 128 mm | 192 mm |
| Ø33x4.4 | 128 mm | 192 mm |

By using hot air and heating the SharkBite PEXa tubing until it becomes transparent (around 130 °C), it is possible to create tighter bends.

SharkBite PERT Pipeline Marking

SharkBite PEXa EVOH **3 LAYERS**

APPLICATIONS

- PEXa cross-linked polyethylene pipe by peroxide system. 3-layer oxygen diffusion barrier.
- Prevents oxidation of metal elements, such as the boiler and metal components.
- Made of EVOH (ethylene-vinyl alcohol) coating for oxygen diffusion resistance according to DIN 4726.
- Corrosion resistant - Excellent thermal memory - Lightweight and flexible.
- Maximum temperature 95° C.
- Minimum temperature -40° C.
- Maximum pressure 8 Bar.
- Oxygen diffusion <0,1 mg/ld.

Cross-linked Polyethylene PEXa EVOH

Cross-linked polyethylene (commonly abbreviated as PEX), is used for the manufacture of pipes for hot and cold water supply, for the transport of natural gas and for the transport of industrial chemicals, manufactured according to ISO15875 (EUROPE) AS2492 (AUSTRALIA) and ASTM F876 (USA).

The raw material of PEX is HDPE (high density polyethylene) and contains bonds in the polymer structure that completely change its characteristics, changing the thermoplastic to a thermoset.

The cross-linking process can be carried out using different technologies which are recognised by international standards and identified as

international standards and identified as :
PEXa - PEXb - PEXc

The cross-linking process is carried out during extrusion (PEXa) or after extrusion (PEXb and PEXc). The ISO 15875 standard indicates the degree of cross-linking that each type of cross-linking process must have

PEXa ≥ 70% [SharkBite PEXa EVOH](#)
PEXb ≥ 65%
PEXc ≥ 60%

Cross-linking improves the properties of the pipe, resulting in:

1. High temperature resistance 95° C
2. Low temperature resistance - 40° C - PEXa
3. Chemical resistance
4. Impact resistance
5. Tensile strength
6. Excellent thermal memory

PEXa is produced by the peroxide method (Engel or Infrared System I.R. are the most common). Cross-linking is carried out at a temperature higher than the melting point of HDPE polyethylene. The material is extruded and immediately thereafter held at high temperatures and/or pressures. During this process, the peroxide decomposes into free radicals and reacts with the polymer, creating chains that are connected to each other in a three-dimensional network by chemical bonds.

SharkBite PEXa EVOH pipes due to its excellent thermal memory can be repaired in the event of an accidental choke during installation. **The repair can be made according to the following recommendations:**

- Make sure that the installation is not pressurised.
- Straighten the pipe by hand.
- Heat the choked area with a heat gun (never with a flame) until the pipe becomes transparent and returns to its original size and position.
- Allow the pipe to cool at room temperature or with the help of a wet cloth until the pipe has returned to its original opaque appearance.
- In case of PEXa EVOH tubing with oxygen barrier, repair is also possible but the EVOH layer will be damaged in the area where heat is applied.

SharkBite PEXa EVOH pipes due to their excellent thermal memory absorb the increase in size due to freezing. Cross-linking by the PEXa system (peroxide method), allows it to expand (due to the increase in volume due to freezing) and absorb much of the expansion energy of the freezing process. No pipe is completely immune to freezing, but RWC's SharkBite PEXa EVOH and SharkBite PEXa EVOH Plus pipe is extremely resistant to freezing damage.

In case of frostbite, the following recommendations may be made:

- The installer or user must correct the lack of insulation to prevent recurrence.
- Pour hot water over the affected portion of the SharkBite PEXa EVOH - SharkBite PEXa EVOH Plus tubing.
- Wrap warm rags or towels around the affected portion of the frozen pipe.
- Heat the area with air (never with a flame) or an air heater until completely thawed.

BENDING RADIUS :

| Diameter | Cold Bending |
|----------|--------------|
| Ø16x1.5 | 64 mm |
| Ø16x1.8 | 64 mm |
| Ø16x2.2 | 64 mm |
| Ø20x1.9 | 80 mm |
| Ø20x2.8 | 80 mm |
| Ø25x2.3 | 125 mm |
| Ø25x1.5 | 125 mm |
| Ø32x2.9 | 192 mm |
| Ø33x4.4 | 192 mm |

SharkBite PERT EVOH **3 LAYERS**

APPLICATIONS

- ERT Type II temperature resistant polyethylene pipe.
- 3-layer oxygen diffusion barrier 3 LAYERS (PERT / Adhesive / EVOH).
- Manufactured with EVOH (ethylene vinyl alcohol) layer for oxygen diffusion resistance according to DIN 4726. Corrosion resistant - Lightweight and flexible.
- Maximum temperature 70° C.
-
-

Manufactured according to ISO 22391

2. Systems

SYSTEM are all those components necessary for a complete and correct installation. The components must come from the same manufacturer and form an integrated system.

The advantages of using a system from the same manufacturer are:

- 100 % compatibility between all components.
 - Integration under the same manufacturer's installation standard (Technical manual)
 - 100 % guarantee of all components and the installation as different manufacturers do not conflict with each other, which may not be compatible with each other within the tolerance of the ISO standard.

 - SharkBite NEXUS
 - SharkBite FLOOR

SharkBite[®]

PRESS

- Available in \varnothing 16, \varnothing 20, \varnothing 25, \varnothing 26, \varnothing 32, \varnothing 40, \varnothing 50 y \varnothing 63 mm
- Compatible with PEX, PERT and MULTICAPA pipes with aluminium
- SharkBite PRESS is a Press Fitting type system
- PPSU (Polyphenylsulphone) Range
- Brass (CW617N) Range
- European manufacture

- **Stock saving** : It allows us to save up to 50% of fittings as it is compatible with PEX, PERT and MULTICAPA depending on the application.
- **Minimum volume** : It is designed with the minimum volume with respect to the pipe, which allows us to embed the installation in both classic (bricks) and modern (plasterboard or synthetic materials) partition walls.
- **Pressure and temperature resistance** : The working temperature can be raised to 95° C, with a pressure of 10 bar.
- **Corrosion resistance** : The smooth surface of the pipe prevents sedimentation from adhering to the walls during the lifetime of the system.
- **Low weight** : It is light in weight, which speeds up installation and saves time and money in transportation.
- **Long life** : If the system is used according to technical specifications in pressures and temperatures, the whole system is built to last for a long life. system is built to last at least 50 years.
- **No noise** : The PPSU material avoids the noises produced by the water circulation, due to its low roughness coefficient, damping between 2 and 3 times the water hammer, compared to the traditional brass or copper systems.
- **Healthy** : Manufactured with materials approved for the transport of drinking water, providing no odour, taste or toxicity.

JAWS / PRESSINGS
U - RF - TH

COMPATIBLE with all
tools on the market

Caution with the use of chemical threads, strippers and/or PVC glues.

Anaerobic sealants used for metal threads cause stress cracks and breaks in contact with thermoplastic materials. Regardless of whether the threads of the fittings are metal, indirect or accidental contact with PPSU plastic parts can cause cracking or breakage. SharkBite PRESS fittings (PPSU or PPSU with metal insert) should be fitted with thread, PTFE tape, Silicone Tape or hemp / tow. See compatibility table in the technical manual.

PTFE tape thicknesses shall meet the following requirements:

- 0.075 mm to 0.100 mm for threads of ½”.
- 0.100 mm to 0.200 mm for threads of ¾” and 1”.
- The PTFE tape shall be 100 % PTFE according to EN 571 - 3 FRp.
- Leave the first thread free to facilitate joining.

The tightening torque or maximum torque for tightening of threads is as follows:

- For ½" threads it is 40 Nm (Newton metre)
- For ¾" threads it is 60 Nm (Newton metre)
- For 1" threads it is 70 Nm (Newton metre)

For **SharkBite PRESS** (PPSU) Teehreaded fittings (fitting, elbow or Tee), it must be ensured that the flat seal is placed in the socket without using any other sealant:

- Tighten by hand and finish tightening with the appropriate spanner to a maximum of ¼ turn.

The use of SharkBite PRESS (PPSU) Tee With Female threaded fittings should be in accordance with the following recommendations:

- Do not use male threads deeper than 14 mm.
Use the fixed spanner according to the thread size to fix the Tee With Female Threadthread and another spanner to insert the male thread.

Assembly Instructions

1. Cut the tube perpendicularly at 90°.

2. Calibrate and chamfer the end of the tube.

3. Insert the end of the bevelled tube into the fitting until the tube extends beyond the visual check hole.

4. Press, following the tool manufacturer's instructions. For correct pressing, it is necessary that the tool complies with the maintenance required by the manufacturer.

The following instructions and recommendations should be followed for the correct use of SharkBite PRESS accessories:

- Ensure that the pipe is cut at 90°.

- Ensure that no material remains in the tube and that the chamfering is done correctly internally and externally.

- Do not use any tools or lubricants to insert the tube into the SharkBite PRESS fitting.
- Insert straight tube into fitting.

- Check that the clamp is correctly positioned, aligned with the shell holder.

- Carrying case.

SharkBite[®]

NEXUS

- Available in \varnothing 16, \varnothing 20, \varnothing 25 and \varnothing 32 mm
- Compatible with PEX, PERT and MULTICAPA pipes with aluminium
- SharkBite NEXUS is a Push Fit quick connect system.
- PPSU range (Polyphenylsulphone)
- BRASS Range

- **Time saving** : With SharkBite NEXUS you can save up to 70% of installation time.
- **Stock saving** : It allows us to save up to 50 % of fittings as it is compatible with PEX, PERT and MULTICAPA depending on the application.
- **Minimum volume** : It is designed with the minimum volume with respect to the pipe, which allows us to embed the installation in both classic partition walls (bricks) and modern ones (plasterboard or synthetic materials).
- **Pressure and temperature resistance** : The working temperature can be raised to 95° C, with a pressure of 10 bar. pressure of 10 bar.
- **Corrosion resistance** : The smooth surface of the pipe prevents sedimentation from adhering to the walls during the life of the system. walls during the life of the system.
- **Low weight** : It is light in weight, which speeds up installation and saves time and money in transportation.
- **Long life** : If the system is used according to technical specifications in pressures and temperatures, the whole system is built to last for a long life. system is built to last at least 50 years.
- **No noise** : The PPSU material avoids the noises produced by the water circulation, due to its low roughness coefficient, damping between 2 and 3 times the water hammer, compared to the traditional brass or copper systems.
- **Healthy** : Manufactured with materials approved for the transport of drinking water, providing no odour, taste or toxicity.

Caution with the use of chemical thread sealants, thread strippers and/or PVC glues.

Anaerobic sealants used for metal threads cause stress cracks and breaks in contact with thermoplastic materials. Regardless of whether the threads of the fittings are metallic, indirect or accidental contact with PPSU plastic parts can cause breakage or cracking. SharkBite NEXUS fittings (PPSU and PPSU with metal insert) should be fitted with thread, PTFE tape, Silicone Tape or hemp / tow. **See compatibility table in the technical manual.**

PTFE tape thicknesses shall meet the following requirements:

- 0.075 mm to 0.100 mm for 1/2" threads.
- 0.100 mm to 0.200 mm for 3/4" and 1" threads.
- The PTFE tape shall be 100 % PTFE according to EN 571 - 3 FRp.
- Leave the first thread free to facilitate joining.

The tightening torque or maximum torque for thread tightening is as follows:

- For ½" threads it is 40 Nm (Newton metre)
- For ¾" threads it is 60 Nm (Newton metre)
- For 1" threads it is 70 Nm (Newton metre)

SharkBite NEXUS (PPSU) fittings with a movable thread (fitting, elbow or movable tee), it must be ensured that the flat gasket is fitted in the socket without the use of any other sealant:

- Tighten by hand and finish tightening with the appropriate spanner to a maximum of ¼ turn.

The use of SharkBite NEXUS (PPSU) Tee With Female Threaded fittings should adhere to the following recommendations:

- Do not use male threads deeper than 14 mm.
Use the open-end spanner according to the thread size to fix the Tee With Female Thread and another spanner to insert the male thread.

Assembly Instructions

1. Cut the tube perpendicularly at 90°.

2. Calibrate and chamfer the end of the tube.

3. Insert the end of the bevelled tube into the Nexus fitting. The GREEN visual safety indicator will indicate that the joint is correct and secure.

4. Check that the tube is attached to the SharkBite Nexus fitting by pulling in the opposite direction to the fitting to ensure that the clamp is anchored on the tube.

For correct use of SharkBite NEXUS accessories the instructions and recommendations below should be followed:

- Ensure that the tube is cut to 90° and that no material remains in the tube.

- Do not use any tools or lubricants to insert the tube into the SharkBite Nexus fitting.
- Insert the tube straight into the fitting.

- Check that the tube is correctly installed in the accessory by checking that the green indicator is visible through the control window.

THE SMARTEST HEATING

The SharkBite Floor underfloor heating and cooling system adapts to the needs of your project, both in new buildings as well as in refurbishments and extensions.

Its range of components and control system makes it the ideal solution for a simple, energy-efficient and aesthetic execution.

Our experts are at your disposal to provide you with all the support you need, before, during and after installation.

- **Safety** : RWC started in the Plumbing and Heating market in 1949. With the security and solvency of our multinational parent company Reliance Worldwide Corporation (Aus) Pty Ltd, world leaders in the plumbing and heating industry, RWC has been in business since 1949.
- **Reliability**: RWC stands for constant reliability. When you buy RWC products you become a customer for life. We offer a proven guarantee on the quality, performance and reliability of our products.
- **Innovation**: RWC has been and will always remain at the forefront of innovation in plumbing and heating systems. With an impressive track record. We owe this to our customers. RWC listens to its customers, identifies their needs, and then develops products that meet those needs.
- **Simplicity**: RWC uses state-of-the-art technology to design and create products. Our goal is to aim for ease of installation and to minimise maintenance. A high quality product that is easy to install, to satisfy customers and reduce installation times. We manufacture with the aim of making the installer's job easier and faster, with a positive effect on cost reduction.
- **Quality**: Every RWC product is manufactured to the highest quality standards, using pioneering techniques and only the highest quality materials. Our reputation is built on quality and high performance. Knowing this, our customers appreciate the convenience of being able to turn to a single supplier for a truly comprehensive range of ultra-reliable plumbing and heating products. RWC is an accredited manufacturer to the following international standards.

REASONS TO INSTALL SharkBite Floor

Improved technical comfort. Like the sun, SharkBite Floor uses radiant heat to warm the floor of the room, creating a cosy and comfortable atmosphere.

Increased usable space. As there are no visible emitting elements, the usable space is increased compared to other air-conditioning systems by between 3% and 5%.

Reducción del consumo. Diseñado para trabajar a baja temperatura, el sistema de climatización SharkBite Floor reduce el consumo energético hasta un 20 % respecto a otros sistemas de climatización.

Reduced noise. Creates a relaxed and quiet environment, without noise from pipes or air flow. The insulating board and cement mortar together behave like a floating floor, and can help to comply with the requirements of the DB-HR of the CTE.

Greater heating control. Create the perfect comfort zone with individual or multiple room temperature control. Simple, standard and intelligent solutions.

A more hygienic and healthier environment. The temperature differences between the air and the floor surfaces will be reduced, and the effect of the air convection will not be perceived, and there will be no discomfort for the user and no movement of dust.

Renewable heat source. Compatible with conventional and renewable heat sources that reduce environmental impact, including heat pumps and solar panel systems.

Universal control. Enable multi-zone heating throughout the home by combining SharkBite Floor with AIRZONE.

SharkBite FLOOR

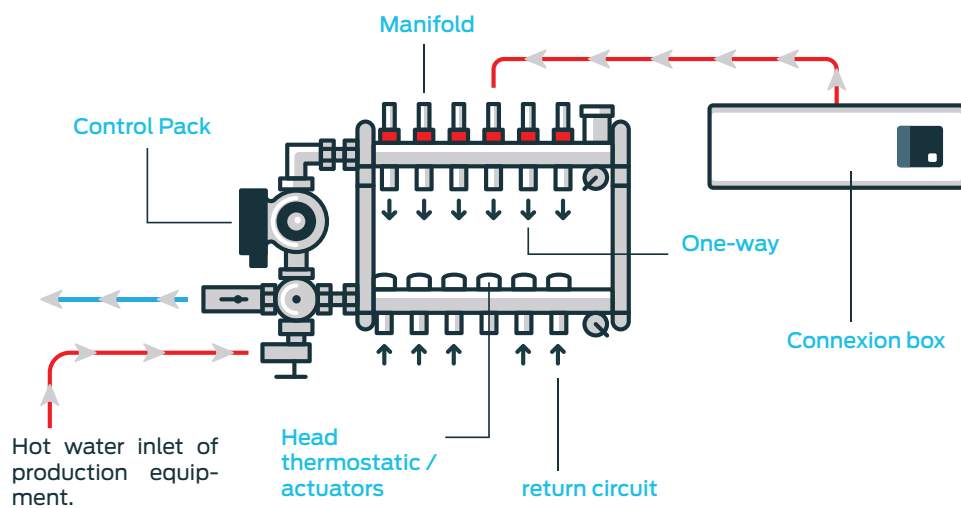

50% of the energy exchange between humans and the environment is produced by radiation. In order to achieve a greater influence of the air conditioning system on comfort conditions, radiant air conditioning must be used. In order to achieve a uniform energy exchange between the system and the users, it is necessary to have a large radiant surface available, this being the floor of the building, rather than very localised points of energy emission. This is the case with radiators and air conditioners, which transfer energy by convection, generating an inhomogeneous distribution of energy.

Air conditioning systems by convention, by influencing the air temperature instead of the radiant surface to reach the comfort temperature, require a greater energy input, as the air has a lower density and greater volume. The energy exchange by radiation depends on the fourth power of the absolute temperatures of the bodies. Increasing or decreasing the temperature of the radiant surface by one degree means a multiplying factor that is not reached if we vary the air temperature by one degree.

SharkBite Floor controls the temperature in each room using intelligent thermostats via cable or radio connection.

The control unit controls the manifold, opening or closing the actuators and circulating the water at the temperature required for each circuit. The collector control pack, consisting of a thermostatic mixing valve and pump, fulfils a dual function: regulation of the inlet temperature and movement of the flow rate required by the system, making it compatible with any source of energy from the combustion of oil derivatives or natural gas or renewable energy, such as biomass, solar, aerothermal or geothermal.

Key Components

All SharkBite Floor systems are supplied to the highest standards of quality and reliability.

Plasticized Base Plate Fixing.

No matter what type of floor or space you are working with, we have a low-profile base plate low profile base plate (ideal for renovations or low height) and a normal profile base plate for new construction. Our base plate is suitable for PEX, PERT, PB or MULTICAPA pipes in \varnothing 16, \varnothing 17, \varnothing 18 and \varnothing 20. Manufactured in 40 Kg density, it complies with the UNE EN 1264 standard.

Thermostatic/Head Actuator

SharkBite Floor Actuators are fast responding. Compact design allows for easy installation. With status window (red / green). Compatible with M30 thread and IP42 protection.

SharkBite PEXa EVOH pipes and SharkBite PERT EVOH with 3 or 5 layers

The widest range of tubing made of PEXa EVOH or PERT EVOH with 3 or 5-layer oxygen barrier protection. The flexibility of SharkBite tubing will allow you to make tight angle bends easily and feasibly, even when working at low temperatures.

Control/Regulation

The exclusive and elegant Airzone thermostats allow the components of the radiant air-conditioning system to be controlled via cable or radio connection, with touch-sensitive and anti-regulation screens.

Manifold

Manufactured to the highest quality standards, our 1" stainless steel and polyamide manifolds are available in a range from 2 to 12 outlets. They are supplied pre-assembled with 3/4" Euroconus outlet, shut-off valves, bleeders, fill/drain cock, thermometers and Clamping kit.

Control Pack

With the function of mixing and controlling the water temperature, it is suitable for heating systems up to 14kW and connects directly to the manifold without the need for additional brackets. The nickel-plated control package consists of a mixing valve, a Grundfos

Choosing the Right System

Depending on the type of work and application, there are many types and diversity of components in underfloor heating, but we can group the systems into three main groups:

Traditional system (new construction and residential sector).

Without height limitation, plasticised base plate can be installed without low profile and PEXa EVOH or PERT EVOH pipes of Ø16, Ø17, Ø18 and Ø20 mm.

Industrial and specific systems.

Installation of plates with compressive strength and installation of pipes providing higher flow and lower pressure drop, with Ø20 mm.

Renovation and refurbishment systems.

In these cases, due to height limitations, it is necessary to install low-profile plasticised plates, using Ø16 mm pipes in PEXa EVOH or PERT EVOH

The floor finishes have different thermal resistances, being recommended for radiant air-conditioning systems those of lower resistance.

Ceramics and granites.

Most ceramic and granite floor finishes have a low thermal resistance. The surface transmits temperature quickly and efficiently, making it the perfect finish for underfloor heating and cooling systems.

Vinyl and linoleum.

This material offers low heat resistance due to its thin layer. Vinyl and linoleum types are suitable for use with underfloor heating but the temperature must not exceed 29° C.

Timber.

Wood finishes perform well on underfloor heating, but are not suitable for installation on underfloor heating/cooling. The surface temperature should not exceed 29° C and the manufacturer's instructions should be followed.

Stainless Steel Manifolds for Underfloor Radiant Heating

They consist of two multiple bars, one for the flow and one for the return, with ball shut-off valves and thermometer, drain/fill tap and automatic air vent on the flow and return. On the flow bar, each circuit has an easy-to-read adjustable flow meter. Each circuit on the return is fitted with a protection cap and integral control valve which allows the user to adjust the water volume, or can be removed for the fitting of an electric head/actuator.

Characteristics:

- 1" stainless steel manifold.
- Supplied pre-mounted on mounting plates.
- Supply and return valves with thermometers.
- Thermostatically controlled - Flow meters.
- Automatic drain valves with fill and drain valve.
- 3/4" Euroconus type threaded outlets (connectors not included)

Materials

- Body : 304 Stainless Steel
- Joints : Fibre
- Fixing Bracket: Zinc plated
- Valves 1" : Nickel-plated brass
- Deaerator Polyamide Pack / Tap Kit: Nickel-plated brass

Specifications

- Maximum service pressure : 10 bar
- Maximum temperature : 90 °C
- Connections Manifold : 1"
- Connections Fittings : Euk 3/4

Fluidising additive (for mortar)

DOSAGE: Between 1 % and 1.5 % of the weight of the cement. It is recommended to add the additive to the mixing water or to the previously mixed concrete. In this case it is necessary to continue kneading to obtain a good distribution of the additive in the concrete mass for at least 1 minute more per m³ of concrete.

| SN7UNCOILER | Uncoiler | Ø 16-17-18-20 | SN7RECTIFICA | Straightener included | Ø 16-17-18-20 |

Pipe Compatible Folding Uncoiler (SN7UNCOILER)

- EXa EVOH.
- PERT EVOH.
- Multilayer.
- For diameters from 14 mm to 20 mm.
- For rolls up to 600 metres.
- Saves tubing by using the exact number of metres per circuit.
- Manufactured in stainless steel.

Multi-Layer Pipe Straightener with Aluminium (SN7RECTIFICA)

- Can be installed on the uncoiler and used to straighten tubes.
- Multilayer with Aluminium from Ø 14 to Ø 26.

Control-Regulation

Head - Multiple thermostatic actuator with a thermostatic wax element to transform electrical energy into movement. The compact design allows easy and quick installation in any position with two indicator windows (green and red).

- Clear indicator to show when open or closed.
- Available for 24V or 230V.

| Code | Dimension | Dimension |
|------------|-----------|-----------|
| SKIT450014 | 230V | M30 |
| SKIT450015 | 24V | M30 |

Technical Data

- Function mode : 2-Positioning, spring return without tensioning
- Supply voltage : 24V DC/AC 230 V AC
- Electrical input current : 0.2A / 0.3A
- Permanent power absorption : 2.5 - 3W
- Full stroke time : 3 - 4 mins aprox
- Nominal stroke : 3 mm
- Nominal spring return load : 90N
- Environment temperature : 0 °C to 50 °C
- Storage temperature : -20 °C to +70 °C
- Cable length : 0.8M / 2 x 0.5 mm²
- Degree of protection : IP42
- Protection class : Double insulation

Junction Box 8 Zones

8-zone junction box for underfloor heating installations, allowing the connection of thermostats with actuators for each zone. The box can be mounted directly on the wall or on a rail. The status of each zone is indicated by an LED.

Advantages

- Modular design: connection modules can be plugged in.
- Prepared for control of circulator pumps.
- Activation of 24 V servomotors possible.
- Unambiguous connection of room thermostats and actuators.
- Direct wall mounting.
- LED operation indicator.
- Silent.

| Code | Description | Dimension |
|------------|-------------------------|-----------|
| WIRE300010 | Junction Box 220 V -24V | 8 Zones |

Programmable Touch Thermostats

Programmable thermostats with touch screen, ideal for controlling the switch-on times and temperature in a room. The thermostats are designed for semi-recessed installation using cable connection.

Advantages

- Seven-day setting with six programmable events on each day.
- Accurate temperature control to +/-1°C.
- Ergonomic, low profile and modern styling.
- Heating and cooling (hot and cold).

At RWC we know how important it is to have an adequate control and regulation system for our underfloor heating, as well as its integration with other air conditioning installations, providing the comfort, efficiency and design that our customers demand.

This is the premise behind the collaboration with Airzone, leaders in the air conditioning market, with more than 20 years' experience in the development of control and regulation systems. It allows the different combinations required by the air-conditioning installation to be managed from a single control centre. By installing thermostats in each of the zones, it is possible to control the comfort temperature in each of them, avoiding over-consumption of energy and achieving greater energy efficiency. Airzone's Webserver Cloud allows remote management of all the systems, with total connectivity, converting smartphones or tablets into smart thermostats, connected via the free Airzone Cloud application. Through this application, Airzone's technical support can be connected remotely, providing support for door start-up, configuring operating parameters or diagnosing the installation. Thanks to its compatibility with Google Assistant and Alexa, the entire installation can be managed from home via voice control. All Airzone systems can be integrated into the building's home automation system via the KNX integration gateway.

Airzone System Benefits

Independent Temperatures

Choose the perfect temperature for each room. Because not everyone feels hot or cold in the same way.

Energy Efficiency

Our energy efficiency algorithms favor the rational use of energy, maximizing the potential of your system.

Cloud Technology

In addition to offering you remote control, we ensure that your system is always up to date thanks to remote updates.

High Quality

Recommended by the main manufacturers of air conditioning equipment on the market. More than 20 years of experience at your service.

Economical Savings

Activate only the zones you are using. Control consumption and take advantage of low-cost hours to save more. to save more.

Integrated Design

Air conditioning and heating integrated in the same thermostat. The perfect balance between design, finish and control.

Compatibility

Our systems can be integrated with any machine from the main manufacturers in the market.

Warranty

You can extend the warranty on your Airzone products for an additional year free of charge. Your peace of mind, our satisfaction.

Pack RadianT365

The Airzone RadianT365 system allows the control of radiator water heating systems, as well as underfloor heating and cooling systems.

Zoned control of up to 6 independent temperature zones, with the possibility of extending 2 more zones with the Airzone production control unit.

- System unit operating mode.
- On/Off according to demand.
- Limitation of the setpoint temperature.
- Relative humidity measurement for each zone.
- Limitation of minimum and maximum temperatures for efficient control with Eco-Adapt function.
- Opening and closing of the solenoid valve for weekly maintenance.

The RadianT365 system has been designed to perform the zoned control of water heating installations with radiators or underfloor heating hot and cold.

3. Control of Flow, Temperature and Pressure

RWC valves offer a wide and robust range of accessories for potable and non-potable water supply.

With over 60 years of experience in the development and innovation of thermostatic mixing valves, flow and pressure control valves, providing protection and safety in hydraulic installations, creating safe and comfortable spaces.

- Ball Valves
- Temperature Control
- Pressure Control
- Auxiliary Components
- Combinations and Special Valves

RWC valves are available with a wide variety of sections and end connections, allowing installation in residential, commercial and industrial applications.

Characteristics :

- Safe and reliable control technology.
- Temperature, flow and pressure control.
- Versatile combined solutions.
- Wide range of auxiliary accessories.

Benefits :

- Accuracy in water control.
- Optimisation of flow temperature.
- User safety, health and hygiene.
- Minimises water and energy consumption.

Nickel Plated Brass Water Ball Valve

- BSP connection.
- Working pressure PN25-PN40.
- PVC handle in red or blue colour.

| Code | Description | Dimension |

| BVAL400051 | Female Ball Valve PN40 - Red Handle | 2" |
| BVAL400131 | Female Ball Valve PN25 - Red Handle | 2" 1/2 |

Nickel Plated Ball Valves

Ball valves allow flow control and are essential for use in plumbing, heating, air conditioning, fire protection, gas, air, etc. installations. They sectorise the installation, allowing maintenance and repair work to be carried out without the need to interrupt the total operation of the installation and emptying it. Their ¼ turn quick closing, normally with a lever, makes their operation very simple and their design is smaller than that of gate valves.

A complete range of isolating ball valves from ¼" to 2"-½" diameter, BSP connection and working pressure PN40 or PN25 (2"-½") with a maximum temperature of 85°C. Galvanised steel handle and PVC sleeve in red and blue to designate uses (generally hot and cold) complying with EN 331 standard.

Materials

- Body : Nickel-plated brass
- Ball : Chrome-plated brass
- Stem : Brass
- Sealing : EPDM
- Lever : Galvanised steel + PVC Cover
- Seat : PTFE

Water temperature control is our speciality.

RWC as the world's leading manufacturer and supplier of thermostatic controls and thermostatic mixing valves, temperature control products are at the heart of our product range. RWC offers a complete range of systems to control water temperature and enable accurate management of comfort and safety levels in any building.

We were the original pioneers of thermostatic controls and bring almost 60 years of experience to the industry. Our track record of innovation, quality and value has maintained our global leadership, and provides building designers and product specifiers with unrivalled quality and choice. While for building owners and occupants, choosing Reliance temperature controls ensures high performance combined with safe operating criteria for total peace of mind. Within our temperature control range, you will find a wide selection of thermostatic mixing valves (TMVs valves) suitable for heating and domestic hot water applications in residential, commercial and industrial uses.

Heatguard Style Mixing Valve

- Highly polished chrome finish
- Sleek, compact design fits easily into the front of wall power outlets
- Includes check valve and filter.
- Hot water circuit cut-off in case of no cold water supply.
- Compression or MBSP threaded connection on the same model.
- Hot water temperature range 55-65°C (Max. 85°C).
- Cold water temperature range 5-25°C.
- Temperature adjustment range 35-45°C.
- Working pressure 0.2 to 6.0 bar.
- Minimum flow rate 2 L/min.

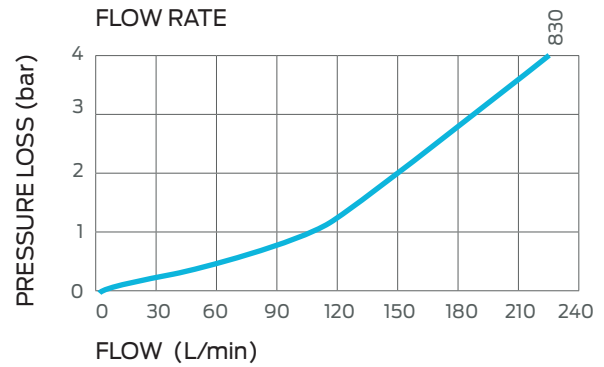

| Code | Description | Dimension |
|------------|-------------|------------|
| HEAT135001 | Union | 15 mm-1/2" |

Masterguard Mixing Valve

- The integrated fixing point allows easy attachment to walls or floors.
- Designed for very high flow rates, with extremely stable outlet temperature.
- Adjustable temperature mechanism with locking function allows installer flexibility.
- Minimal moving parts and simple construction reduce maintenance service interval.
- 4-in-1 installation fitting provides easy orientation of the valve to match inlet piping, and includes cross-flow prevention, isolation and filtration.
- Hot water circuit shut-off in the event of no cold water supply.
- Hot water temperature range 90°C.
- Cold water temperature range 5-25°C.
- Temperature adjustment range 35-65°C.
- Working pressure 0.2 to 6.0 bar.

| Code | Dimension | LPM | Dimension |
|----------|-----------|---------------|-------------|
| MIX83004 | 830 | 120 a 2.5 bar | 1" FBSP |
| MIX84004 | 840 | 170 a 2.5 bar | 1" 1/4 FBSP |
| MIX85004 | 850 | 260 a 2.5 bar | 1" 1/2 FBSP |
| MIX86004 | 860 | 360 a 2.5 bar | 2" FBSP |

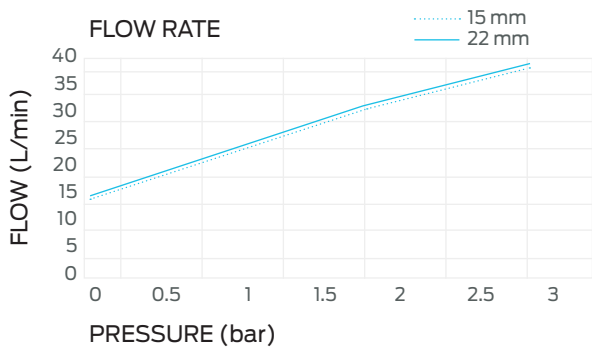

Ausimix Compact Mixing Valve

- Approved for healthcare (TMV3) and the public sector (TMV2)
- Temperature adjustment key on valve cover for easy maintenance
- Operates in larger areas up to 10 : 1 pressure differential, instead of industry standard 5 : 1
- Viton seals, not EPDM, to significantly improve performance at higher temperatures
- Easy to install.
- 2-in-1 telescopic model allows 10 mm adjustment at any inlet.
- 2 in 1 model includes check valve and strainer.
- 4-in-1 model includes check valve, strainer, isolation and measuring point for pressure or temperature in one compact unit.
- Hot water circuit shut-off in case of no cold water supply.
- Compression or MBSP threaded connection on the same model.
- Hot water temperature range 52-65°C (Max. 85°C).
- Cold water temperature range 5-25°C.
- Temperature adjustment range 38-46°C.
- Working pressure 0.2 to 5.0 bar.
- Minimum flow rate 4 L/min.

| Code | Description | LPM | Dimension |
|------------|-------------------|--------------|-----------------|
| HEAT110751 | Telescopic 2 in 1 | 35 a 2.5 bar | 15 mm-1/2" MBSP |
| HEAT110750 | 2 in 1 Union | 35 a 2.5 bar | 15 mm-1/2" MBSP |
| HEAT110755 | 2 in 1 Union | 35 a 2.5 bar | 22 mm-3/4" MBSP |

| HEAT110785 | 4 in 1 Union | 35 a 2.5 bar | 22 mm-3/4" MBSP |

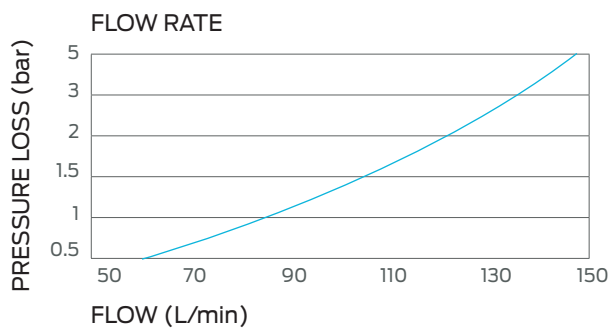

Euromixer Mixing Valve

- Hot water circuit cut-off in case of no cold water supply.
- Compression or MBSP threaded connection on the same model.
- Hot water temperature range 55-85°C
- Cold water temperature range 5-25°C.
- Temperature adjustment range 38-60°C.
- Working pressure 0.5 to 10.0 bar.
- Minimum flow rate 15 L/min HEAT630100.
- Minimum flow rate 20 L/min HEAT640100.

| Code | Dimension | LPM | Dimension |
|------------|-----------|----------------|-------------|
| HEAT630100 | 630 | 120 to 2.5 bar | 1" FBSP |
| HEAT640100 | 640 | 150 to 2.5 bar | 1" 1/4 FBSP |

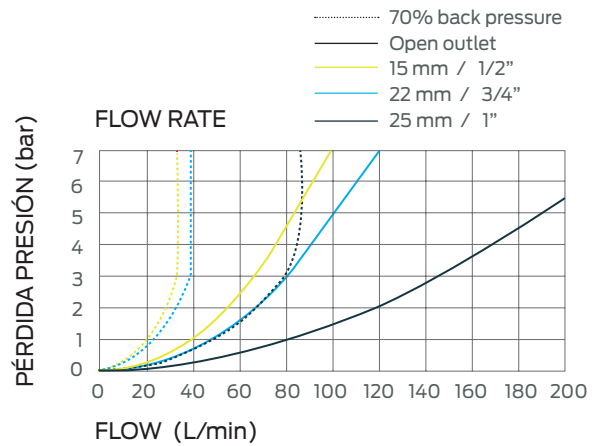

Controls for regulating water pressure.

At RWC we are pioneers in building flow control products, manufacturing them since 1949. Reliance offers a complete range of solutions for regulating fluid pressure in hydraulic installations. Our innovative products enable installers to accurately measure, control and adjust flow rates for optimum safety, protecting the installation and connected components from overpressure damage. The pressure remains constant even with variations in inlet pressure. Controls pressure under both flow and no-flow conditions. Reducing operating and maintenance pressure minimises installation noise and saves water. Can be used in commercial and industrial installations.

Pressure Regulator 315i Commercial

- Suitable for hot and cold supplies
- Can be installed in any orientation
- Easy to read pressure gauge
- Robust design
- Fully serviceable
- Pressure control under both flow and no-flow conditions.
- Fully serviceable built-in filter.
- Easy to replace one-piece cartridge containing all parts.
- Maximum working pressure 25.0 bar.
- Adjustable pressure range 1.0-6.0 bar.
- Pressure reduction ratio 10 : 1.
- Maximum working temperature 70°C.

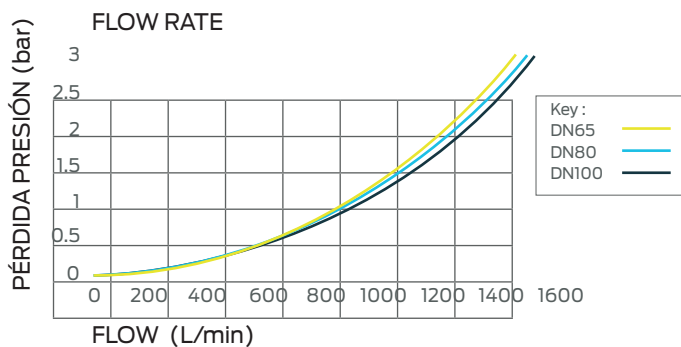

| Code | Dimension |
|------------|-------------------|
| PRED315010 | 1/2" MBSP Union |
| PRED315020 | 3/4" MBSP Union |
| PRED315030 | 1" MBSP Union |
| PRED315040 | 1" 1/4 MBSP Union |
| PRED315050 | 1" 1/2 MBSP Union |
| PRED315060 | 2" MBSP Union |

Pressure Regulator 6247 Commercial-industrial

- Made of corrosion resistant bronze.
- Precise pressure control, adjustable from 1.5-6.0 bar.
- Robust design.
- All working components contained in a single cartridge.
- Test point at the base of the valve.
- Can be installed in any orientation.
- Pressure control under both flow and no-flow conditions.
- Easy to replace one-piece cartridge containing all parts.
- Maximum working pressure 16.0 bar.
- Adjustable pressure range 1.5-6.0 bar.
- Flange PN 16.
- Maximum working temperature 60°C

| Code | Description | Dimension |
|------------|--|-----------|
| PRED624001 | Maximum pressure 16 bar at 60°C. Adjustable between 1.5-6.0 bar. | DN65 |
| PRED624002 | Maximum pressure 16 bar at 60°C. Adjustable between 1.5-6.0 bar. | DN70 |
| PRED624003 | Maximum pressure 16 bar at 60°C. Adjustable between 1.5-6.0 bar. | DN100 |
| BVAL624001 | Mini test point pall valve for 6247 PRV | 1/4" MBSP |

Pressure Regulator Cartridges

- Spare parts for pressure reducing valves with one-piece cartridges and threaded connection cartridge.

| Code | Description | Dimension |
|------------|---|---------------------|
| REDC320002 | For series 320 and TVA - use up to 80°C | 1/2" y 3/4" |
| REDC624001 | For 6247 series use up to 60°C | DN65, DN80, DN100 |
| REDC315010 | For 315i series use up to 70°C | 1/2" y 3/4" |
| REDC315020 | For 315i series use up to 70°C | 1" |
| REDC315030 | For 315i series use up to 70°C | 1" 1/4, 1" 1/2 y 2" |

Pressure Regulator Predator

- Can be installed in any orientation providing maximum installation flexibility.
- Pressure control under both flow and no-flow conditions.
- Built-in filter protects the valve seat and is fully serviceable.
- Suitable for hot and cold applications.
- Built-in pressure gauge.
- Compression connection and MBSP thread on the same element.
- Maximum working pressure 16.0 bar.
- Adjustable pressure range 1.0-6.0 bar.
- Maximum working temperature 80°C.

| Code | Description | Dimension |

| GAGE250005 | 63 mm of 0 - 10 bar | 1/4" BSP rear |
| GAGE250008 | 63 mm of 0 - 6 bar | 1/4" BSP bottom |
| GAGE250009 | 63 mm of 0 - 10 bar | 1/4" BSP bottom |

Push Fit Automatic Pressure Relief Valves

- Automatically vents trapped air from a sealed heating system
- Saves time and costs when commissioning new heating systems
- Solid brass construction and heat resistant polypropylene float provide long life and reliability
- Reduces call-outs to rectify airlocks, saving time and money

| Code | Description | Dimension |

Automatic steam traps shall be installed in a vertical position.

BSP Thread connection

Max. working pressure 10 bar
Max. working temperature 110°C

Push Fit Thread connection

Max. working pressure 6 bar
Max. working temperature 95°C

Pressure Relief Valve For Heating 100

- Larger outlet size than the inlet, for high capacity discharges.
- Provides protection against overpressurisation in heating systems.
- Diaphragm design provides improved resistance.
- Cartridges designed for easy replacement without resetting response pressure.
- Maximum temperature 120°C.
- Adjust pressure range from 2.5 bar to 5.0 bar to suit any system requirement.
- High lift design for greater discharge capacity.

Heating Pressure Relief Valve 103

- The diaphragm design provides increased scale resistance and prolongs valve life.
- Direct removal of the one-piece cartridge allows access to the seat for cleaning or cartridge replacement.
- Set relief pressure range of 2.0 bar - 3.0 bar gives system design flexibility.
- Maximum temperature 140°C.
- 0 to 4 bar gauge.
- Available with FBSP/FBSP or MBSP/FBSP connections, for complete installation flexibility.

|------------|-------------|---------------|
| PREL103003 | 3 bar | 1/2" F - FBSP |

Pressure Relief Valve For Drinking Water 104

- Quick removal of the one-piece cartridge for cleaning or replacement.
- Diaphragm design provides improved scale resistance.
- Multiple connections for flexible installation.
- Relief pressure range adjustable from 3.5 - 8.0 bar.
- Maximum temperature 110°C.

Expansion Vessels For Drinking Water And Heating Aquasystem

- With stainless steel flange to prevent corrosion.
- Extra wide diaphragm opening to avoid noise caused by flow.
- EPDM internal membrane to avoid any water contact with the Epoxy coated steel casing, preventing internal corrosion.
- Wide range of products, from 2 litres to 5.000 litres, to cover all applications.
- All versions are supplied with a replaceable spare membrane.
- Temperature range -10°C to 99°C.
- Maximum pressure 10 bar.
- Supplied with pre-charge valve for air pressure recharge.
- Suitable for potable water and heating applications.

Epoxy Coated Steel and Plastic Funnels

- AA type backflow prevention.
- Available in straight or angled version.
- Maximum temperature 99°C.
- Maximum pressure 16 bar.
- Connections at 1/2" and 3/4" BSP respectively.

Safe T Leak Prevention & Detection System

- Monitors system flow rates and timings to identify leaks and isolate the system
- Holiday mode, intensifying monitoring
- Multitude of programming options for all applications
- Optional floor sensor to detect even small leaks
- Minimises water damage if a leak occurs
- Universal flange allows for vertical or horizontal pipe installations
- Configurable alarms with audio alerts
- Battery or mains installation (with battery back-up)
- Low voltage installation

| Code | Description |
|------------|-------------------------|
| PROT150001 | Safe T – Leak Detection |

Tenant Valve Plus Water Control Monoblock

- A compact, space-saving water monitoring unit, ideal for flat blocks and multi-occupancy buildings.
- Comprising ball valve, pressure reducing valve, double check valve, test point and meter connection point.
- Also includes a patented dual-reading pressure gauge to monitor inlet and outlet pressures.
- The single cartridge unit design ensures quick and easy installation, reduced leakage potential and simple maintenance, saving costs.
- Supplied pre-insulated further reducing installation time and cost.
- For use up to 16.0 bar pressure and temperatures up to 80° C.
- For use up to 16.0 bar pressure and temperatures up to 80° C.
- Adaptor available to allow installation of class 'D' gauge suitable for use as a primary load gauge.
- Supplied complete with moulded insulation protective enclosure.

Key Information

Terms and Conditions of Sale.

All purchases are subject to our standard terms and conditions of sale, which can be found at <https://www.SharkBite.es/condiciones-generales/> (Reliance Valves and SharkBite). Prices are VAT at the current rate.

Technical Information.

RWC and its family of products are specifically designed and manufactured to the technical specifications set out in our Technical Specification Guides on our websites. All products must be selected, used and maintained in accordance with these technical specifications and checklists. It is the responsibility of end users to ensure that products are suitable for their application, are correctly installed and maintained, and are used in accordance with our technical guidelines. RWC operates a product development programme, and therefore reserves the right to modify or change the specification of our products without prior notice. All information in this publication is given in good faith, and is believed to be correct at the time of going to press.

Technical Support.

At RWC, we offer installers all the support they need - before, during and after installation.

Technical Helpline.

Our experts are just a phone call away to provide technical advice.

Apoyo en su Puerta.

With one of the largest technical sales teams in Spain, we offer free technical support and advice.

Videos and Guides.

Practical installation and owners' guides.

Underfloor Heating. Free design.

Design solutions with easy-to-follow CAD.
